ADMINER

Ana Meleiro Sánchez

Install the Apache, MySQL and PHP stack on your computer, and , once the teacher tells you wich web database client you must install do the following tasks:

```
Install PHP 7.0, Apache 2.4.17, MySQL 5.6 and Adminer
Install PHP 7
    $ sudo apt-get install python-software-properties
    $ sudo add-apt-repository ppa:ondrej/php
    $ sudo apt-get update
    $ sudo apt-get install -y php7.0
Install Apache 2.4
    $ sudo add-apt-repository ppa:ondrej/apache2
    $ sudo apt-get update
    $ sudo apt-get install apache2
Install MySQL 5.6
    $ sudo add-apt-repository -y ppa:ondrej/mysql-5.6
    $ sudo apt-get update
    $ sudo apt-get install mysgl-server-5.6
Install Other Requirements
    $ sudo apt-cache search php7-*
    $ sudo apt-get install libapache2-mod-php7.0 php7.0-mysql
    php7.0-curl php7.0-json
```

•Create a database with al least 3 tables using the chosen client (Add a snapshot to the document)

← → C ① ① localhost/adminer.php			
∰ Aplicaciones G Google 🖪 Facebook ② WhatsApp Web M gmail			
Idioma: Español ▼			
Adminer 4.2.5	Login		
	Matar da basa da datas]
	Motor de base de datos Servidor	MySQL ▼	
	Usuario	locumost	
	Contraseña		
	Base de datos		
Login Guardar contraseña			

•Fill each one of the different table with at least 5 rows (Add a snapshot for each table's content)

•Create a database backup named like this
(iaw1_u1_t1_backup_name_surname.sql)

•Create a snapshot of main screen of the app in this snapshop point out which are the main CSS divisions. You should use Chrome's of Firefox's Developers tools for this part.

•Change the CSS and create a different version of the main screen: You must find where is the CSS file of the installed WebApp.Create a snapshot for this new vesion.
